SUMMARY

Recent Computer Science graduate from Atma Jaya Yogyakarta University with solid experience in full-stack development and a strong interest in Machine Learning and Blockchain technologies. Proficient in JavaScript, TypeScript, PHP, Python, and Dart. Seeking to leverage expertise in full-stack and AI/ML to build scalable, high-performance systems.

EDUCATION

Atma Jaya Yogyakarta University (Aug 2021 – Jul 2025)

Bachelor of Computer Science (Sarjana Komputer) – GPA 3.71/4.00

Concentration: Software Engineering, Artificial Intelligence | Relevant Coursework: Web Development, Programming, Software Engineering, Computer Architecture & Organization

Vocational High School Hasanah Pekanbaru (2018 - 2021)

Software Engineering – Score 98/100 | Concentration: Web Development

EXPERIENCES

Infinite Learning Indonesia

Web App Developer | Sep 2024 - Jan 2025

- Developed the foundational prototype of an AI-Based crop recommendation system as a capstone project.
- Engineered the initial GIS-based land data analysis to enable the recommendation of 5+ crop types.

Atma Jaya Yogyakarta University

Lecturer Assistant | Feb – Jul 2023

- Assisted 200+ students in understanding C programming fundamentals across 4 parallel classes.
- Designed and implemented 1 guided and 1 unguided practical module to support hands-on learning.

Mattcom Indonesia

Full-Stack Developer | Jan – May 2020

- Developed the official APINDO Riau website using Joomla and PHP, delivering 6+ dynamic pages.

PROJECTS

Financial Intelligence Platform

Personal Project (Jan - Des 2025)

- Built a modern financial application that combines AI-driven news aggregation, real-time portfolio tracking, and intelligent alerting for multi-asset investors.
- Developed an automated news engine that aggregates data from 20+ crypto & financial sources and generates concise summaries using AI text-processing models.
- Implemented a complete portfolio management system supporting stocks, ETFs, crypto assets, commodities, and multi-currency P&L calculation with real-time conversions.
- Designed real-time dashboards providing live quotes for 1000+ assets, historical charts (1D–5Y), and smart asset discovery for investment research.

- Integrated an intelligent alerting system enabling custom price triggers, keyword-based news alerts, email/push notifications, and automated daily market digests.
- Implemented enterprise-grade authentication (OAuth + 2FA), encrypted data handling, and cross-platform sync for consistent mobile/web experiences.
- Built with Flutter, React.js, FastAPI, Ollama, Python, PostgreSQL, Firebase, Redis, REST APIs.

AI-Based Crop Recommendation System

Final Project – Atma Jaya Yogyakarta University (Feb – Jul 2025)

- Developed a web-based decision support system integrating Random Forest, CNN (EfficientNetB0), and GIS to recommend the top 3 most suitable crops.
- Evolved the initial capstone prototype into a robust model, achieving 80%+ accuracy after integrating multiple, complex real-world datasets (BMKG API, SoilGrids API, and user-uploaded images).
- Implemented features such as NDVI satellite visualization and interactive mapping to support precision agriculture and reduce crop failure risks.
- Streamlined the development process using CI/CD pipeline (GitLab CI) for automated testing and SSH-based deployment to a private server.
- Built with React.js, Node.js, Express, Python, MySQL, OpenCV, GIS.

AWARDS & ACHIEVEMENTS

2nd Place – National Hybrid Mobile & Website Development Competition, Infinite Learning (Nov 2024)

Built cross-platform app with React for Web and Kotlin for Mobile to improve team collaboration.

ORGANIZATION EXPERIENCES

Atma Jaya Yogyakarta University – Community Service Program (KKN)

Group Leader | Jul – Aug 2024

- Led planning and execution of multi-sector community programs (health, technology, education, economic empowerment).
- Coordinated with local government and community stakeholders to ensure impactful program delivery.

Informatics Student Association – Academic & Achievement Division

Vice Coordinator | Oct 2022 – Sep 2023

- Directed a team to organize academic tutorial programs (UTS & UAS), supporting 100+ students.
- Provided strategic guidance that improved division activities, reflected in positive participant evaluations.

Member | Sep 2021 – Oct 2022

- Managed and hosted exam tutorial sessions by recruiting qualified mentors and assisting students in challenging subjects.

Informatics Festival – Information Systems Division

Web Developer | Dec 2021 – May 2023

- Developed and maintained registration dashboards and event websites for Informatics Festival 10 and 11.
- Collaborated with cross-functional teams to ensure efficient registration and smooth event management.

SKILLS

Technical Skills: JavaScript, Python, PHP, C, Dart, Java, TypeScript | React.js, Next.js, Express.js, FastAPI, Flutter, Laravel | MySQL, Firebase, PostgreSQL, MongoDB | Git, Docker, Azure

Languages: Indonesian (Native), English (Professional Working Proficiency)
